

Packaging GPG Key

This is the GPG key used for signing the Moonshot DEB and RPM packages.

You should always verify the signature of a package before you install it. These signatures ensure that the packages you install have not been altered (accidentally or maliciously) by any mirror or website that is providing the packages.

You should also verify that the key here has not been tampered with. At the time of writing it has been signed by Adam Bishop and Sam Hartman.

It is also available as a file [5B8179FD.asc](#) and on [public keyservers](#).

```
