

Deploy Trust Router Infrastructure

The Trust Router and the APC are pieces of infrastructure that have to be in place before a functioning trust network can be established. Here you can find instructions on how to deploy each of these components.

If you're not sure about which component(s) you need, visit the Overview of Trust Router Components page (*work in progress*) to learn about them.

Install an APC

- How to install and configure an APC.

Install a Trust Router

- How to install and configure a Trust Router.

Configure the infrastructure

- How to provision Trust Router credentials.
