

Mac Compatibility List

The Moonshot GSS libraries are compatible with macOS. A client for macOS 10.12 and later is available for download. Earlier versions are supported on a self-build basis only.

We **do not** support macOS as a server OS.

1. Key

In the tables below, the following icons have the following meanings:

-  - Moonshot is available for this version of macOS through an installer package and has been tested and verified as working.
-  - Moonshot has unofficially been tested on this version of macOS, but an installer package does not exist for it.
-  - Moonshot is not available for this version of macOS, or is known not to work (at least, not without a large amount of custom work).
-  - Moonshot has not been tested on this version of macOS yet. Let us know if you have tried it!

2. Compatibility

The information in this section is subject to [our software support policy](#).

Version	Supported?	Notes
macOS 10.15 Catalina		Download from our repository. Self-build instructions are here .
macOS 10.14 Mojave		Download from our repository. Self-build instructions are here .
macOS 10.13 High Sierra		Download from our repository. Self-build instructions are here .

3. Download Moonshot for macOS

You can download the latest Moonshot release for MacOS from here: <https://repository.project-moonshot.org/macos/Moonshot.dmg>
