Deploy Moonshot Infrastructure

The Moonshot Identity Provider and Relying Party Proxy components are generally pieces of infrastructure that have to be in place before an Application /Service can use Moonshot. Here you can find instructions on how to deploy each of these components.

If you're not sure about which component(s) you need, visit the Overview of Moonshot Components page to learn about them.

Deploy a Moonshot Identity Provider

- How to install and configure a Moonshot Identity Provider so that your users can make use of their local credentials in a Moonshot environment

Deploy a Relying Party Proxy

- How to install and configure a Moonshot RP Proxy so that your application or service can use Moonshot for authentication
